Risk Factors

- i) Securities investments are subject to market and other risks and there can be no guarantee against loss resulting from an investment in the scheme nor can there be any assurance that the scheme's objectives will be achieved.
- ii) The past performance of the Portfolio Manager does not indicate the future performance of the same scheme or any other future schemes of the Portfolio Manager.
- iii) Risk arising from the investment objective, investment strategy and asset allocation are mentioned as follows:
- The liquidity of the portfolio may be restricted by trading volumes and settlement periods. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the scheme are un-invested and no return is earned thereon. The inability of the Portfolio Manager to make intended securities purchases, due to settlement problems, could cause the Portfolio to miss certain investment opportunities. By the same token, the inability to sell securities held in the portfolio, due to the absence of a well developed and liquid secondary market for debt securities, would result at times, in potential losses to the Portfolio, should there be a subsequent decline in the value of securities held in the portfolio.
 - The liquidity and valuation of the Portfolio's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment.
 - Corporate debt securities are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations (credit risk). Debt securities may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer, among others (market risk). The Portfolio Manager will endeavour to manage credit risk through in-house credit analysis. The Portfolio Manager may also use various hedging products from time to time to reduce the impact of undue market volatility on the portfolio.
 - The value of the portfolio, to the extent invested in fixed income securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.
 - As with any investment in securities, the value of the portfolio can go up or down depending on various factors that may affect the values of the investments. In addition to the factors that affect the value of individual securities, the value of the portfolio can be expected to fluctuate with movements in the broader equity and bond markets and may be influenced by factors affecting capital markets in general, such as, but not limited to, changes in interest rates, currency exchange rates, changes in governmental policies, taxation, political, economic or other developments and increased volatility in the stock and bond markets.
 - Subject to necessary approvals as may be required and within the investment objectives of the Portfolio, the Portfolio Manager may invest in overseas markets which carry a risk on account of fluctuations in foreign exchange rates, nature of securities market of the country concerned, repatriation of capital due to exchange controls and political circumstances.
 - As and when the Portfolio Manager trades in the derivative products, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivatives require the maintenance of adequate controls to monitor the transactions and the embedded market risks that a derivative adds to the portfolio. Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Other risks in using derivatives include but are not limited to : (a) Credit Risk – this occurs when a counterparty defaults on a transaction before settlement and therefore, the Portfolio Manager is compelled to negotiate with another counter party, at the then prevailing (possibly unfavourable) market price, in order to maintain the validity of the hedge. For exchange traded derivatives, the risk is mitigated as the exchange provides the guaranteed settlement but one takes the performance risk on the exchange. (b) Market Liquidity risk where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices. (c) Model Risk, the risk of mis-pricing or improper

valuation of derivatives. (d) Basis Risk arises when the instrument used as a hedge does not match the movement in the instrument/underlying asset being hedged.
